Sensor Scientific, Inc. Platinum Thin Film RTD Elements are fabricated using state-of-the-art thin film processing techniques, resulting in an element of exceptional quality and stability. The wide choice of resistance, tolerance, and size options allows for complete design flexibility.

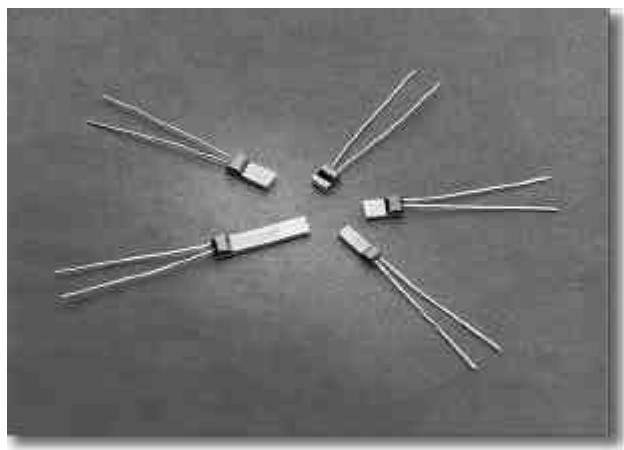

RTD elements are available with extension leads, and incorporated in complete temperature probe assemblies. Please contact Sensor Scientific for additional information.

Assemblies:

Generally, thin film RTD elements are incorporated into some type of assembly for protection. Extension leads may be attached via soldering, crimping, brazing or welding. The attachment method must be capable of withstanding the intended maximum operating temperature.

The following precautions must be taken when incorporating the element into an assembly:

- 1) Avoid straining the element leads.
- 2) If extension leads are attached via soldering or brazing, all flux residue must be removed.
- 3) The resistance of extension leads must be taken into consideration. Resistance value at 0°C calibrated 1mm from end of lead wire.
- 4) If elements are encapsulated in a potting compound, insure that the compound will not induce pressure loads, resulting in a strain-gage effect.

The permissible deviations for platinum resistance elements are determined by the following equations (in accordance with IEC 751,2: 1995-07 [DIN EN 60751: 1996-07]):

Permissible deviation in °C = $\pm(0.15 + 0.002 [t])$ for Class A
Permissible deviation in °C = $\pm(0.3 + 0.005 [t])$ for Class B

Where [t] is the temperature value (in °C)

Deviations in °C apply to all nominal resistances; deviations in Ω only to 100 Ω.

For nominal resistance values other than 100 Ω the deviation values in Ω must be multiplied by the factor $R_0 \times 10^2$.

Other tolerances are available

DESCRIPTION

The OPB860T series of switches is designed to allow the user maximum flexibility in applications. Each switch consists of an infrared emitting diode facing an NPN phototransistor across a .125" (3.18mm) gap. A unique housing design provides a smooth external surface to prevent dust build-up while molded internal apertures give precise positioning and also provide protection from ambient light interference.

FEATURES

- Fully enclosed design allows dust protection.
- Lead spacing at .320".
- .050" and .010" aperture options.
- PCB mountable.
