

CNAS 10 1-22-08

INPUT:  $n \geq 1$  (# of #s in list)

$a_1, \dots, a_n$  (the list  $\text{list}(n)$ )

OUTPUT: The largest value in the list,  
and the position where it is located.

ASSUME: The #s in the list are  
distinct.

Finds LARGEST

- 1.)  $max \leftarrow a_1$
- 2.)  $j \leftarrow 1$
- 3.)  $i \leftarrow 2$
- 4.) while  $i \leq n$
- 5.)  $\left[ \begin{array}{l} \text{if } a_i > max \\ \text{max} \leftarrow a_i \\ j \leftarrow i \end{array} \right.$
- 6.)  $\left[ \begin{array}{l} \text{max} \leftarrow a_i \\ j \leftarrow i \end{array} \right.$
- 7.)  $\left[ \begin{array}{l} i \leftarrow i + 1 \end{array} \right.$
- 8.)
- 9.) print max
- 10.) print j
- 11.) stop

- 1.)  $max \leftarrow a_1$
- 2.)  $j \leftarrow 1$
- 3.) for  $i \leftarrow 2$  to  $n$
- 4.) if  $a_i > max$
- 5.)  $max \leftarrow a_i$
- 6.)  $j \leftarrow i$
- 7.) print max, j
- 8.) stop

Exercise: Trace this Algorithm on:

2, 1, -7, 5, 3, 11, 0

Exercise: What happens if we replace

> by  $\geq$  in line 5. (Assume

new list may have repeats.)

SHORT VERSION OF FIND LARGEST

- 1.)  $j \leftarrow 1$
- 2.) for  $i \leftarrow 2$  to  $n$
- 3.) if  $a_i > a_j$
- 4.)  $j \leftarrow i$
- 5.) print  $a_j, j$
- 6.) stop

## Problem: PATTERN MATCHING

Given Text

$$T_1 T_2 T_3 \dots T_n$$

Find ALL occurrences of A PATTERN

$$P_1 P_2 \dots P_m$$

where  $m \leq n$ .

Ex.  $n = 18, m = 2$

text: 'to be or not to be'  
 $\uparrow \uparrow \uparrow$   
 $T_1 T_2 T_3$

$\uparrow$   
 $T_{18}$

Pattern: 'be'  
 $\uparrow \uparrow$   
 $P_1 P_2$

Answer: 4, 17

Ex  $n=10, m=3$

text: 'xxxxaaaaaxx'   
 ↑ ↑ ↑   
  $T_1$   $T_4$   $T_{10}$

Pattern: 'aaa'   
 ↑ ↑ ↑   
  $P_1$   $P_2$   $P_3$

Answer: 4, 5, 6

□

Ex:  $n=7, m=3$

CHECK POSITION

$T_1 T_2 T_3 T_4 T_5 T_6 T_7$   
 $P_1 P_2 P_3 \rightarrow$  ~~slower~~ OVER

$T_1 T_2 T_3 T_4 T_5 T_6 T_7$   
 $P_1 P_2 P_3 \rightarrow$

$T_1 T_2 T_3 T_4 T_5 T_6 T_7$   
 $P_1 P_2 P_3 \rightarrow$

$T_1 T_2 T_3 T_4 T_5 T_6 T_7$   
 $P_1 P_2 P_3 \rightarrow$

$T_1 T_2 T_3 T_4 T_5 T_6 T_7$   
 $P_1 P_2 P_3$

$i=1$

$i=2$

$i=3$

$i=4$

$i=5$

RANGE  
 OF  
 POSSIBLE  
 ANSWERS.

19

IN GENERAL, RANGE OF POSSIBLS

ANSWERS IS  $\boxed{1}$  TO  $\boxed{n-m+1}$

INPUT:  $n, m$  SATISFYING  $1 \leq m \leq n$ .

text:  $T_1 \dots T_n$  TO BE SEARCHED

Pattern:  $P_1 \dots P_m$  TO SEARCH FOR

OUTPUT: ALL INDICES  $i$  SUCH THAT

$P_1 \dots P_m$  MATCHES  $T_i \dots T_{i+m-1}$

# PATTERN MATCH

10

- 1.)  $i \leftarrow 1$
- 2.) while  $i \leq n - m + 1$
- 3.)  $j \leftarrow 1$
- 4.) match  $\leftarrow$  true
- 5.) while  $i \leq m$  and match
- 6.)  $\left[ \begin{array}{l} \text{if } P_j \neq T_{i+j-1} \\ \text{match} \leftarrow \text{false} \end{array} \right.$
- 7.)  $\left[ \begin{array}{l} \text{else} \\ j \leftarrow j + 1 \end{array} \right.$
- 8.)
- 9.)
- 10.) if match
- 11.) Print 'match found at position'  $i$
- 12.)  $i \leftarrow i + 1$
- 13.) stop

Exercise: Insert this on the 'to be or  
not to be and ' xxxaaaaax'  
examples.

Ex. 'hand the band to andy and I'

Search for 'and'

" " 'bando'

CHAPTER 3 : ATTRIBUTES OF ALGORITHMS

- Correctness
- Clarity
- Elegance
- Efficiency

SECURITY ASPECT :

10.) if not found ←  
 or 10.) if found = false  
or 10.) if  $i > n$

ELEGANCE is essentially brevity:

Ex. 1.) get  $n$   
 2.)  $sum \leftarrow 0$   
 3.)  $i \leftarrow 1$   
 4.) while  $i \leq n$

5.)  $sum \leftarrow sum + i$   
 6.)  $i \leftarrow i + 1$

7.) print  $sum$   
 8.) stop

1.) get  $n$   
 2.) print  $\frac{n(n+1)}{2}$   
 3.) stop

Output is:  $S = 1 + 2 + 3 + \dots + (n-2) + (n-1) + n$

$$= \sum_{i=1}^n i$$

14

Formula:  $S = \frac{n(n+1)}{2}$

Proof:  $S = 1 + 2 + 3 + \dots + (n-2) + (n-1) + n$

$$S = n + (n-1) + (n-2) + \dots + 3 + 2 + 1$$

---

$$S + S = (n+1) + (n+1) + (n+1) + \dots + (n+1) + (n+1) + (n+1)$$

$$2S = n(n+1)$$

$\therefore$   $S = \frac{n(n+1)}{2}$
