

LL

CNAPS 10 1-31-08

Insertion Sort

N=6

EX	2		4	6	1	5	3
	2	4		6	1	5	3
	2	4	6		1	5	3
	2	4	1	6	5	5	3
	2	1	4	6	5	5	3
	1	2	4	6	5	5	3
	1	2	4	5	6	5	3

2

1 2 4 5 3 6

1 2 4 3 5 6

1 2 3 4 5 6 |

Input: a, a_1, \dots, a_n

Output: modified list in increasing order

Insertion Sort

13

- 1.) $L \leftarrow 2$
- 2.) while $L \leq n$
- 3.) $j \leftarrow L$
- 4.) while $j \geq 2$ and $a_j < a_{j-1}$
- 5.) $\left[\text{swap } a_j \leftrightarrow a_{j-1} \right.$
- 6.) $\left. j \leftarrow j-1 \right]$
- 7.) $L \leftarrow L+1$
- 8.) stop

Run Time Analysis

BASIC CASE: Comparison of list Elements.

BEST CASE: occurs when list is already sorted.

$$\# \text{ COMP} = n - 1 \quad \checkmark$$

x | x x x ... x x

Worst case: occurs when list is sorted
 in decreasing order.

$n = 6$

comp

6		5	4	3	2	1	1
5	6		4	3	2	1	1
4	5	6		3	2	1	1
3	4	5	6		2	1	1
2	3	4	5	6		1	1
1	2	3	4	5	6		1
							<hr/>
							15

$$1 + 2 + 3 + 4 + 5 = \frac{5 \cdot 6}{2} = 15$$

IN GENERAL (i.e. FOR ARBITRARY n) INSERTION
 SORT DOES IN WORST CASE:

$$\# \text{ Comp} = \frac{n(n-1)}{2}$$

$$\text{i.e. } \# \text{ Comp} = 1 + 2 + 3 + \dots + (n-1) = \frac{(n-1)(n-1+1)}{2}$$

$$\text{RECALL } 1 + 2 + 3 + \dots + n = \frac{n(n+1)}{2}$$

$$\text{i.e. } \# \text{ Comp} = \frac{1}{2} n^2 - \frac{1}{2} n$$

□

Ex. Suppose we have 2 Algorithms

A & B which solve the same problem.

Suppose they do

A : $1000n$ Basic Ops.

B : $10n^2$ Basic Ops.

On input of size n (say in worst-case)

Which one should be considered more efficient?

Solve : $1000n = 10n^2$
 $100 = n$

8

EQUALLY EFFICIENT

A is more eff. for larger values of M.

EX: SAME QUESTION

A: $12n\sqrt{n} = 12n^{3/2}$ BASIC OPS.

B: $3n^2$ " "

$$12n\sqrt{n} = 3n^2 \Rightarrow 4\sqrt{n} = n = \sqrt{n} \cdot \sqrt{n} \Rightarrow 4 = \sqrt{n} \Rightarrow n = 16$$

LD

IN GENERAL, IF

A: ax BASIC OPS

B: bx^2 " " "

THEN Δ IS MORE EFF. FOR LARGE n ,

NO MATTER WHAT a & b ARE!

NOTE: ANY PARABOLA IS EVENTUALLY ABOVE

ANY LINE.

THIS IS TRUE EVEN WITH LOWER ORDER

TERMS PRESENT

we classify all algorithms with Run Time $O(n)$ (Linear) $O(n^2)$ (Quadratic)

likewise $O(n^2)$ $O(n^3)$ $O(n^4)$ $O(n^5)$ $O(n^6)$ $O(n^7)$ $O(n^8)$ $O(n^9)$ $O(n^{10})$ $O(n^{11})$ $O(n^{12})$ $O(n^{13})$ $O(n^{14})$ $O(n^{15})$ $O(n^{16})$ $O(n^{17})$ $O(n^{18})$ $O(n^{19})$ $O(n^{20})$
