CMPS 101 Final Review Problems

- 1. State the following properties:
 - a. The Binary Search Tree Properties:
 - b. The Red-Black Tree Properties:
- 2. Let x be a node in a red-black tree. Show that the longest path from x to a descendent leaf has length at most twice that of a shortest such path.
- 3. Prove that any red-black tree on *n* nodes and with height *h* satisfies $h \le 2\lg(n+1)$. (Use the following fact: If *x* is any node in a red-black tree, then the number of internal (i.e. non-nil) nodes in the subtree rooted at *x* is at least $2^{bh(x)} 1$.)
- 4. Draw the Red-Black tree which results from inserting the keys 5, 4, 1, 3, 2 (in order) into an initially empty tree. Draw all intermediate trees in this process.
