

We will have weekly (roughly) written homework assignments plus one midterm and final.
Composition of evaluation:

- 25 percent for homework assignments.
- 35 percent for midterm.
- 40 percent for final.

If we can't find enough help with grading then the above agreement might change. However, no changes will be made after the first three weeks of classes. We also might not be able to grade all exercises of each assignment. In that case we will pick a subset and base the number of points you get on the entire assignment on the subset of exercise we picked.

I will assign extra credit problems in the assignments and may be also in the tests. If you solved a significant amount of the extra credit problem, I will mention it in your final evaluation.

The prerequisite for this course are CIS 101 (Abstract Data Types), CE 16 (Discrete Math) and CIS 130 (Computational Models). You cannot take this class unless you have had the above courses or are able to receive waivers for the courses. You need to give me the waiver(s) by the end of the 2nd class. To obtain such a waiver, please talk to the Undergraduate Director.

All homework assignments and all tests are to be done completely by yourself. **Cheating will be punished by strongest means available to me, which include:**

- Letter to your provost.
- Grade zero on the particular test or assignment.
- Mention that you cheated in your evaluation.
- Failing the course.
- Exclusion from Major or from University.

There will be no "incompletes" in this class!
